SUMMARY

Senior Frontend Engineer with **6 years** building large-scale React and TypeScript applications for enterprise clients. Built the frontend for a **production RAG system** at CPPIB — SSE-based streaming chat wiring LangChain, vector DB, and AWS Athena into the UI — used by **14,000+ employees** across **25+ knowledge bases**. Currently leading frontend delivery for Lloyds Banking Group at Publicis Sapient in a microfrontend architecture (React, TypeScript, Redux Toolkit), with earlier work spanning fintech, healthcare, and manufacturing and mentoring **2–3 junior engineers** through code review.

EXPERIENCE

Senior Frontend Engineer

July 2024 – Present

Publicis Sapient

Pune, India

- Delivered frontend across **two enterprise engagements** — Knowledge Initiative (CPPIB) and CCP (Lloyds Banking Group) — owning **end-to-end delivery** on each.
- Engineered the KI chat interface on Server-Sent Events, rendering tokens as they streamed rather than waiting on full responses, for **14,000+ users** querying **100,000+ documents** across **25+ knowledge bases**.
- Architected the CCP payment flow from scratch — **splitting it into discrete Payment, Review, and Success steps with explicit Error, Blocked, and Cancelled states** — so branch staff and contact center agents confirmed details before committing and every failure path had a defined outcome rather than a dead end.
- Mentored **2–3 junior engineers** through code review, guiding component design, state handling, and testing practices.

Software Engineer

September 2023 – July 2024

IBase-t India Software Pvt. Ltd.

Pune, India

- Co-owned an internal JSON schema-driven form library adopted as the form layer across **4 modules** of Solumina I-Series, used by **8–10 teams**, enabling new screens to ship as configuration and reducing custom UI code.
- Supported consuming teams — reviewed schema usage, coordinated version upgrades, and served as the point of contact for issues raised against the package.

Software Engineer

November 2020 – September 2023

ScaleReal Technologies Pvt. Ltd.

Pune, India

- Shipped production frontends across **3 client products** (hospitality, healthcare, fintech), from greenfield setup through ongoing feature work.
- Developed responsive web applications following Atomic Design and TDD within Agile/Scrum teams.
- Improved Lighthouse/PageSpeed scores **from the 50s to 90s+** through lazy-loading, asset compression, and deferred non-critical JS.

PROJECTS

CCP — Colleague Channels Platform | *React, TypeScript, Redux Toolkit, Microfrontends, Internal Component Library*

- Owned the Profile, Make Payments, and Pending Payments journeys on Lloyds' microfrontend platform.
- Architected the multi-step payment flow (Payment, Review, Success, plus Error/Blocked/Cancelled states) **end-to-end, from scratch**, giving colleagues a single flow to confirm and commit payments with **full error handling built in**.
- Implemented the Pending Payments view — filtering, sorting, and search across **up to 100 records** — kept responsive via pagination.
- Managed state and data fetching across these journeys using Redux Toolkit and RTK Query.
- Wrote unit and integration tests across owned journeys, alongside QE coverage via Playwright and Cucumber.

Knowledge Initiative (KI) | *React, TypeScript, Redux, REST APIs, Server-Sent Events (SSE)*

- Built a streaming chat UI for CPPIB across **100,000+ private documents**, choosing **Server-Sent Events over request-response polling** so tokens rendered as they were generated instead of the user waiting on a full completion.
- Created the knowledge base picker (selector + "/" slash-command, fully keyboard-navigable), letting users switch between **25+ isolated knowledge bases**, including Legal, Finance, and HR, directly from the chat input.

- Optimized the conversation history sidebar with cursor-based pagination and list virtualization (react-window) as chat history grew.
- Introduced export-to-PDF and share-chat actions — became **one of the most-used features** per team feedback.
- Assembled the admin dashboard surfacing ingestion status and PDF counts, giving the ops team direct visibility into pipeline health.

Solumina I-Series | *React, Redux, JSON Schema, Jest, React Testing Library, Storybook, Private npm Registry, GitLab*

- Co-owned an internal JSON schema-driven form library that **let new screens ship as configuration instead of hand-written JSX** — a single renderer mapping schema field types to React components, supporting conditional visibility, dependent fields, and declarative validation.
- Handled nested and repeatable field groups through recursive rendering, so a single schema could describe a full multi-section inspection form; published the library as a versioned package to a private npm registry, where it was adopted as the form layer across the application.
- Tested components with Jest and React Testing Library, documented them in Storybook for consuming teams, and shipped product screens on top of the library.

Lodgistics | *React, Jest, React Testing Library, Redux, Material UI*

- Built the Guest Connect messaging feature end-to-end — Twilio integration for SMS, plus Action Cable (WebSockets) — so hotel staff saw guest messages arrive in real time.
- Rolled out the task management UI — assigning tasks to staff, tracking status through completion, and handing off open items between shifts — with unit and integration test coverage via Jest and React Testing Library.

TangoRx | *React, TypeScript, Jest, Redux, Axios, REST APIs, Nivo, Styled-Components*

- Engineered patient management and pharmacy workflow screens supporting Federal 340B compliance, integrating with a Kotlin/Postgres backend, and assembled the reporting dashboard with Nivo charts.
- Developed **8+ custom hooks and HOCs** and handled data fetching via Axios across **20+ modules** — shipping new features, fixing production issues, and maintaining existing screens.

DealSafe | *React, TypeScript, GraphQL, Apollo Client, Redux, Ant Design, Styled-Components*

- Constructed pages across an internal admin app to manage deals, customers, transactions, and users — including a timeline view showing where each deal sat in the escrow lifecycle, and a reporting section with Ant Design charts.
- Consumed GraphQL APIs backed by Django and Postgres, with unit and integration test coverage across the admin pages.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, TypeScript

Libraries & Frameworks: React.js, Next.js, React Native, Redux, Redux Toolkit, Jest, React Testing Library, Storybook, Styled-Components, Material UI, Ant Design

Architecture: Microfrontends, Module Federation, Atomic Design, Design Systems, Component Libraries, Responsive Design

Testing: Unit Testing, Integration Testing, TDD, Jest, React Testing Library, Playwright, Cucumber

Performance: Code Splitting, Bundle Optimization, Lighthouse, PageSpeed, Cross-browser Compatibility

APIs & Integration: REST APIs, GraphQL, Apollo Client, Axios, WebSockets, Server-Sent Events (SSE)

RAG/AI: LangChain, Vector DBs, AWS Athena, Prompt Engineering

Tools & Workflow: Git, GitHub, GitHub Actions CI/CD, Webpack, Babel, Agile, Scrum

Databases: MongoDB, Firebase Firestore

CERTIFICATIONS & LEARNING

GenAI Basics, Using Gen AI – Text, AI Trends – Emerging Technologies — Publicis Groupe (2025)

EDUCATION

D.Y. Patil College of Engineering
Bachelor of Engineering — CGPA: 8.45/10

Pune, Maharashtra
August 2018 – June 2021
