SUMMARY

Senior Frontend Engineer with nearly 6 years of experience building enterprise web applications across banking, fintech, healthcare, and manufacturing. Currently delivering frontend for Lloyds Banking Group at Publicis Sapient, working in a microfrontend architecture with React, TypeScript, and Redux Toolkit. Previously built the frontend for a production RAG system at CPPIB, integrating LangChain, vector DB, and AWS Athena into a streaming chat interface.

EXPERIENCE

Senior Experience Engineer (Frontend)

July 2024 – Present

Publicis Sapient

Pune, India

- Working across two enterprise client engagements – **CCP** for Lloyds Banking Group and **Knowledge Initiative (KI)** for CPPIB – owning frontend delivery on both.
- Built a shared page consumed by every journey on the CCP platform, delivered via Module Federation and integrated with each owning team.
- Deliver end-to-end on assigned journeys and features – UI, state management, API integration, and tests – working alongside backend, ML, and QE teams.

Software Engineer

September 2023 – July 2024

IBase-t India Software Pvt. Ltd.

Pune, India

- Delivered frontend features for Solumina I-Series, iBase-t's manufacturing operations platform for Aerospace & Defense and medical device clients.
- Restructured a large codebase into 40+ monorepo packages organized by feature module, so feature teams could build and deploy independently.

Software Engineer

November 2020 – September 2023

ScaleReal Technologies Pvt. Ltd.

Pune, India

- Delivered production frontends across three client products in hospitality, healthcare, and fintech, from greenfield setup through to ongoing feature work.
- Built responsive web applications following Atomic Design and TDD within Agile/Scrum teams.
- Took Lighthouse/PageSpeed scores from the 50s into the 90s through lazy-loading, asset compression, and deferring non-critical JS.

PROJECTS

CCP – Colleague Channels Platform | *ReactJS, TypeScript, Redux Toolkit, Microfrontends, Internal Component Library*

- Building journeys on Lloyds Banking Group's Colleague Channels Platform (CCP), an internal platform used daily by branch staff and contact centre agents, where journeys are deployed as independent microfrontends.
- Built a shared page used across every journey in the platform, delivered through Module Federation and integrated into each journey by working directly with the owning teams.
- Owned the Profile, Make Payments, and Pending Payments journeys, and built their UI with the internal component library.
- Built the multi-step payment flow – Payment, Review, and Success pages, along with Error, Blocked, and Cancelled states – so colleagues could confirm details before committing a payment.
- Handled state management and data fetching across those journeys using Redux Toolkit and RTK Query.
- Wrote unit and integration tests across the journeys I owned, working alongside QE who covered end-to-end flows with Playwright and Cucumber.

Knowledge Initiative (KI) | *ReactJS, TypeScript, Redux, REST APIs, Streaming UI*

- Built a streaming chat UI for CPPIB that lets users query 1 lakh+ private PDFs across separate knowledge bases in plain English – handled real-time token streaming, loading states, and fallback when the model has no relevant context.
- Built the knowledge base picker with two entry points – a selector component and a '/' slash-command inline in the chat input – fully keyboard-navigable, letting users switch between isolated document collections (Legal, Finance, HR) without leaving the input.
- Integrated with RAG backend APIs (LangChain, vector DB, AWS Athena) to wire retrieval results into the chat interface.
- Built the conversation history sidebar with cursor-based pagination, lazy loading, and list virtualization via react-window – kept scrolling smooth as chat history grew.

- Added export-to-PDF and share-chat actions to the chat interface, handling the trigger flow, loading states, and error cases around backend-generated exports.
- Built the admin dashboard UI, surfacing metadata like PDF counts and ingestion status from the backend.

Solumina I-Series | *ReactJS, Redux, LernaJS, Jest, React Testing Library, GitLab*

- Built an internal JSON-based forms library – pass in a JSON schema and it renders the form fields, used across multiple modules to cut down repetitive form code.
- Built out MES, SQM, MRO, and EQMS modules for iBase-t's cloud-native manufacturing platform, working on inspection planning and non-conformance tracking screens.
- Built screens that surfaced ERP/PLM-sourced manufacturing records, consuming REST APIs and handling sync and error states on the UI side.

Lodgistics | *ReactJS, Jest, React Testing Library, Redux, Material UI*

- Built the Guest Connect messaging feature end-to-end – Twilio integration for SMS, plus Action Cable (WebSockets) so hotel staff saw guest messages arrive live without refreshing.
- Built the task management UI – assigning tasks to staff, tracking status through completion, and handing off open items between shifts.
- Wrote unit and integration tests with Jest and React Testing Library across messaging and task workflows.

TangoRx | *ReactJS, TypeScript, Jest, Redux, Redux-Sagas, Styled-Components*

- Built patient management and pharmacy workflow screens supporting Federal 340B compliance, integrating with a Kotlin/Postgres backend on AWS Lambda.
- Built the reporting dashboard with Nivo charts, wiring async data through Redux Sagas and 8+ custom hooks and HOCs.
- Worked across 20+ modules of the healthcare platform – shipping new features, fixing production issues, and maintaining existing screens.

DealSafe | *ReactJS, TypeScript, GraphQL, Redux, Redux-Sagas, Styled-Components*

- Built the escrow flow UI covering the full deal lifecycle – funds in escrow, in transit, disputed, released – handling edge cases like frozen funds during disputes and inspection timers expiring into auto-release.
- Set up the frontend architecture from scratch – build tooling (Webpack, Babel), routing, and a Redux Saga-based async layer that scaled to 15+ feature modules.
- Adopted GraphQL to reduce overfetching versus the previous REST setup, integrating with a Django/Postgres backend across web and Flutter mobile.

TECHNICAL SKILLS

- **Languages:** HTML, CSS, JavaScript, TypeScript
- **Libraries & Frameworks:** React.js (ReactJS), Next.js, React Native, Redux, Redux Toolkit, Jest, React Testing Library, Styled-Components, Material UI
- **Architecture:** Microfrontends, Module Federation, Monorepo, Atomic Design, Component Libraries, Responsive Design
- **Testing:** Unit Testing, Integration Testing, TDD, Jest, React Testing Library, Playwright, Cucumber
- **Performance:** Code Splitting, Bundle Optimization, Lighthouse, PageSpeed, Cross-browser Compatibility
- **APIs & Integration:** REST APIs, GraphQL, WebSockets
- **RAG/AI:** LangChain, Vector DBs, AWS Athena, Prompt Engineering
- **Tools & Workflow:** Git, GitHub, GitHub Actions CI/CD, Webpack, Babel, Agile, Scrum
- **Databases:** MongoDB, Firebase Firestore

CERTIFICATIONS

- **GenAI – The Basics** – Publicis Groupe (Jan 2025)
- **Using Gen AI – Text** – Publicis Groupe (Feb 2025)
- **AI Trends – Emerging Technologies** – Publicis Groupe (Mar 2025)

EDUCATION

D.Y. Patil College of Engineering
Bachelor of Engineering — CGPA: 8.45

Pune, Maharashtra
August 2018 – June 2021

EXTRACURRICULAR

- **Technical Writing:** Published 2 articles on frontend development on Medium.
- **Open Source:** Contributed to JalgaonCohelp, a platform providing COVID-19 resources for Jalgaon district residents.
