SUMMARY

Senior Frontend Engineer with nearly 6 years of experience building enterprise web applications across banking, fintech, healthcare, and manufacturing – including the frontend for a production RAG system at CPPIB. Built that chat interface on a Server-Sent Events (SSE) stream, wiring LangChain, vector DB, and AWS Athena retrieval into the UI. Currently delivering frontend for Lloyds Banking Group at Publicis Sapient in a microfrontend architecture with React, TypeScript, and Redux Toolkit.

EXPERIENCE

Senior Experience Engineer (Frontend)

July 2024 – Present

Publicis Sapient

Pune, India

- Delivered frontend across two enterprise engagements – **Knowledge Initiative (KI)** for CPPIB, then **CCP** for Lloyds Banking Group – owning end-to-end delivery on each.
- Engineered the KI chat interface to consume a streamed HTTP response, rendering tokens as they arrived and handling incomplete or failed streams.
- Own frontend delivery on assigned journeys – UI, state management, API integration, and tests – working cross-functionally with backend, ML, and QE teams.
- Mentor junior engineers through code review, guiding component design, state handling, and testing practices.

Software Engineer

September 2023 – July 2024

IBase-t India Software Pvt. Ltd.

Pune, India

- Developed frontend features for Solumina I-Series, iBase-t's manufacturing operations platform for Aerospace & Defense clients.
- Co-owned an internal JSON schema-driven form library used as the form layer across the application, alongside feature work on the product screens.
- Supported the teams consuming the library – reviewed schema usage, handled version upgrades, and resolved issues raised against the package.

Software Engineer

November 2020 – September 2023

ScaleReal Technologies Pvt. Ltd.

Pune, India

- Delivered production frontends across three client products in hospitality, healthcare, and fintech, from greenfield setup through to ongoing feature work.
- Built responsive web applications following Atomic Design and TDD within Agile/Scrum teams.
- Took Lighthouse/PageSpeed scores from the 50s into the 90s through lazy-loading, asset compression, and deferring non-critical JS.

PROJECTS

CCP – Colleague Channels Platform | *ReactJS, TypeScript, Redux Toolkit, Microfrontends, Internal Component Library*

- Building journeys on Lloyds Banking Group's Colleague Channels Platform (CCP), an internal platform used daily by branch staff and contact center agents, where journeys are deployed as independent microfrontends.
- Owned the Profile, Make Payments, and Pending Payments journeys, and built their UI with the internal component library.
- Designed the multi-step payment flow – Payment, Review, and Success pages, along with Error, Blocked, and Cancelled states – so colleagues could confirm details before committing a payment.
- Implemented the Pending Payments view – list rendering with filtering, sorting, and search across payment records.
- Managed state and data fetching across those journeys using Redux Toolkit and RTK Query.
- Wrote unit and integration tests across the journeys I owned, working alongside QE who covered end-to-end flows with Playwright and Cucumber.

Knowledge Initiative (KI) | *ReactJS, TypeScript, Redux, REST APIs, Server-Sent Events (SSE)*

- Built a streaming chat UI for CPPIB that lets users query 100,000+ private documents across separate knowledge bases in plain English – rendered tokens as they streamed in, with loading states and fallback when the model has no relevant context.
- Developed the knowledge base picker with two entry points – a selector component and a “/” slash-command inline in the chat input – fully keyboard-navigable, letting users switch between isolated document collections (Legal, Finance, HR) without leaving the input.

- Integrated with RAG backend APIs (LangChain, vector DB, AWS Athena) to wire retrieval results into the chat interface.
- Optimized the conversation history sidebar with cursor-based pagination, lazy loading, and list virtualization via react-window – kept scrolling smooth as chat history grew.
- Added export-to-PDF and share-chat actions to the chat interface, handling the trigger flow, loading states, and error cases around backend-generated exports.
- Created the admin dashboard UI, surfacing metadata like PDF counts and ingestion status from the backend.

Solumina I-Series | *ReactJS, Redux, JSON Schema, Jest, React Testing Library, Storybook, Private npm Registry, GitLab*

- Co-owned an internal JSON schema-driven form library – a single renderer that mapped schema field types to React components and supported conditional visibility, dependent fields, and declarative validation, so new screens shipped as configuration rather than hand-written JSX.
- Handled nested and repeatable field groups through recursive rendering, so a single schema could describe a full multi-section inspection form; published the library as a versioned package to a private npm registry, where it was adopted as the form layer across the application.
- Wrote unit and integration tests with Jest and React Testing Library, developed and documented components in Storybook for consuming teams, and shipped product screens on top of the library.

Lodgistics | *ReactJS, Jest, React Testing Library, Redux, Material UI*

- Built the Guest Connect messaging feature end-to-end – Twilio integration for SMS, plus Action Cable (WebSockets) so hotel staff saw guest messages arrive live without refreshing.
- Shipped the task management UI – assigning tasks to staff, tracking status through completion, and handing off open items between shifts.
- Wrote unit and integration tests with Jest and React Testing Library across messaging and task workflows.

TangoRx | *ReactJS, TypeScript, Jest, Redux, Axios, REST APIs, Nivo, Styled-Components*

- Built patient management and pharmacy workflow screens supporting Federal 340B compliance, integrating with a Kotlin/Postgres backend on AWS Lambda.
- Assembled the reporting dashboard with Nivo charts, and built 8+ custom hooks and HOCs used across the app.
- Handled data fetching across the app with Axios over REST APIs, working across 20+ modules – shipping new features, fixing production issues, and maintaining existing screens.

DealSafe | *ReactJS, TypeScript, GraphQL, Apollo Client, Redux, Ant Design, Styled-Components*

- Built pages across an internal admin app used to manage deals, customers, transactions, and users – including a timeline view showing where each deal sat in the escrow lifecycle.
- Added the reporting section with Ant Design charts, surfacing deal, customer, and transaction data for the operations team.
- Wrote unit and integration tests across the admin pages, and consumed GraphQL APIs backed by Django and Postgres.

TECHNICAL SKILLS

- **Languages:** HTML, CSS, JavaScript, TypeScript
- **Libraries & Frameworks:** React.js (ReactJS), Next.js, React Native, Redux, Redux Toolkit, Jest, React Testing Library, Storybook, Styled-Components, Material UI, Ant Design
- **Architecture:** Microfrontends (Micro-frontends), Module Federation, Atomic Design, Design Systems, Component Libraries, Responsive Design
- **Testing:** Unit Testing, Integration Testing, TDD, Jest, React Testing Library, Playwright, Cucumber
- **Performance:** Code Splitting, Bundle Optimization, Lighthouse, PageSpeed, Cross-browser Compatibility
- **APIs & Integration:** REST APIs, GraphQL, Apollo Client, Axios, WebSockets, Server-Sent Events (SSE)
- **RAG/AI:** LangChain, Vector DBs, AWS Athena, Prompt Engineering
- **Tools & Workflow:** Git, GitHub, GitHub Actions CI/CD, Webpack, Babel, Agile, Scrum
- **Databases:** MongoDB, Firebase Firestore

CERTIFICATIONS

- **GenAI – The Basics** – Publicis Groupe (Jan 2025)
- **Using Gen AI – Text** – Publicis Groupe (Feb 2025)
- **AI Trends – Emerging Technologies** – Publicis Groupe (Mar 2025)

EDUCATION

D.Y. Patil College of Engineering
Bachelor of Engineering — CGPA: 8.45/10

Pune, Maharashtra
August 2018 – June 2021
